Summary

Data Engineer with 2+ years of experience in media & entertainment domain. Skilled in building data pipelines, transforming complex datasets, and ensuring data quality to support business decision-making. Experienced in using AI tools to enhance data engineering workflows and improve efficiency. Looking for a role to apply these skills in a new industry and grow to manage larger data engineering projects with greater scope.

Skills

Programming Languages & Databases: Python, SQL, Javascript, SQL Server, PostgreSQL

Big Data & Distributed Processing: Apache Spark, PySpark, Hadoop, Hive, Spark SQL, Apache Kafka

Data Engineering & Orchestration: ETL/ELT, Apache Airflow, Data Pipelines, Medallion Architecture, Data Quality, Pipeline Optimization

Cloud Platforms & Data Warehousing: AWS, Google Cloud Platform (GCP), Amazon S3, AWS Glue, BigQuery, Google Cloud Storage, Dataproc

DevOps & Development Tools: Git, GitHub, Docker, Terraform, CI/CD, Linux

Experience

Accenture Pune, India

Data Engineer *Sept 2024 – Present*

- Built ingestion pipelines combining CDC streams and REST APIs from multiple source systems, enabling reliable data ingestion and consistent downstream data availability.
- Designed Gold-layer datasets using lakehouse and Medallion Architecture principles, transforming raw data into analytics-ready tables for reporting and downstream analysis.
- Optimized BigQuery SQL for transformation, reconciliation, and validation, improving query efficiency and reducing unnecessary data processing while maintaining source-to-target data consistency.
- Orchestrated data pipelines using Airflow DAGs, automating task dependencies, retries, and failure handling to improve workflow reliability and reduce manual intervention.
- Automated data quality checks in Python for null values, duplicates, schema consistency, and volume anomalies, detecting data issues before they reached downstream reporting; leveraged AI-assisted tooling to accelerate development and standardize reusable test templates.

Projects

VLR Analytics - Data Analytics Pipeline | *Python, PySpark, Airflow, GCS, BigQuery, Looker Studio*

- Built an end-to-end Medallion Architecture data pipeline processing 500K–1M player performance records across 100+ esports events, transforming raw data into analytics-ready datasets.
- Developed Bronze-to-Silver PySpark transformations for data cleaning, validation, deduplication, and aggregation, improving data consistency and downstream analytical usability.
- Orchestrated automated data ingestion and processing workflows using Apache Airflow and Google Cloud Run, integrating cloud storage and BigQuery for scalable data processing and analytics.
- Built 3 interactive Looker Studio dashboards using curated BigQuery datasets to visualize player performance, agent meta trends, team win rates, and map-level statistics.

Education

Devi Ahilya Vishwavidyalaya Indore, India

Master of Computer Applications (MCA) *June 2022 – May 2024*

Certifications

Professional Data Engineer *Google Cloud*

Associate Cloud Engineer *Google Cloud*

Claude Certified Architect – Professional (CCAR-P) *Anthropic*
